Organisation of the project

Course of the project

The project started with a meeting where we tried to understand the assignment and build the foundation of the project together. We then make sure to meet regularly to make sure to ensure that the project was progressing well. Our mistake was that we started the project a bit late so finishing it was a bit of a rush but we still managed to go through it. We have to meet to prepare the next assignment and make sure that we will be better organized.

Way of working

We have definitely progressed in the way-of-working stage. We are now around the In Use stage, as we learnt to use the tools and practices. We now managed to work together better and we all understand the organisation of the team. Moreover, the use of the tools as git is less of a problem as it was during the first assignment.

However, we still have a lot of work to do to put all this in place, and to automate these team processes and make sure that we all feel comfortable. We still need to to practice to make sure that we can work together correctly even under pressure. Also, we still need to practice to master tools like git to establish good practices. To conclude, we are still learning to work together but we made some progress after two weeks of working together.
